GenAI declaration - COS30045 Demonstration 2

Student name: _____ Student ID: _____

Dates of use: 25-26 October 2026

Tool used

OpenAI Codex (ChatGPT) was used as a coding and design assistant.

How it was used

The assistant read the provided Demonstration 2 and Week 4-6 exercise PDFs, planned the deliverables, generated and revised HTML, CSS, JavaScript and SVG code, processed the supplied course CSV files, and checked chart rendering and filters in a browser. On 26 October it redesigned the pages using a visual reference supplied by the student.

Where the output appears

AI-assisted output is in the four exercise pages, responsive visual design, JavaScript chart files, SVG artwork, annotation image, data-building script, README, and derived CSV files in the GitHub repository. The supplied course CSV files are kept in source_data.

Data and presentation choices

The TV charts use Ex6_TVdata_withStar.csv. The electricity scatter and line charts use ARE_Spot_Prices.csv, covering 1998-2024. The histogram omits values above 1,800 kWh/year and reports how many were excluded; the scatterplot includes them.

Student review

Before submission, I will verify the data, links and visualisations, make any needed corrections, and ensure I can explain the code and my use of GenAI during the oral demonstration. This declaration should be updated if further AI assistance is used.
